

DISTRIBUTION SOLUTIONS

Fuse-links type CMF

Rated voltages: 3.6 kV – 12 kV

Rated currents: 63 A – 315 A

Special design of fuse-links resistant to cyclical load typical for motor applications

Robust design suitable for harsh conditions, proven by tests according to the latest IEC standards, secures continuous protection and reliable operation

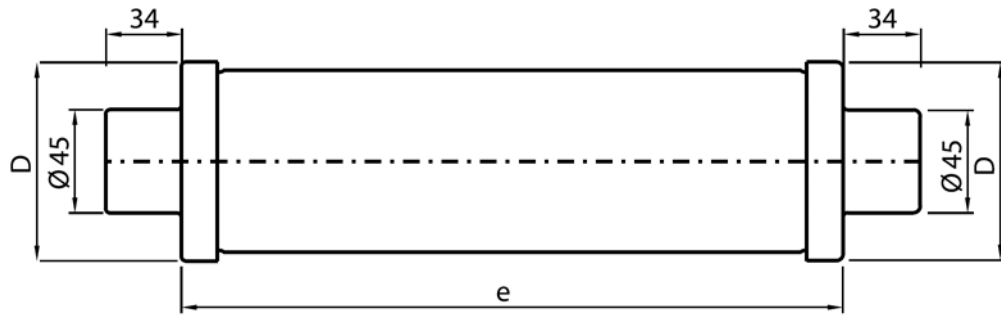

Compatibility with other ABB products provides fast and accurate product selection

Fuse-links type CMF are designed to protect motor circuits against thermal and dynamic effects of short-circuit currents.

Key features:

- Designed and type tested acc. to IEC 60282-1
- Special design allowing to withstand motor inrush starting currents
- Low power losses
- Top level fault current limitation and interruption performance up to 63kA RMS
- Outdoor sealing included in standard version, designed and tested for harsh conditions
- Welded current path
- Contacts made from silver coated cooper
- Striker 80N (medium type)
- Equipped with Temperature Control Unit enabling the additional protection against thermal stresses in small enclosures

Choice of fuse-links for motor protection:

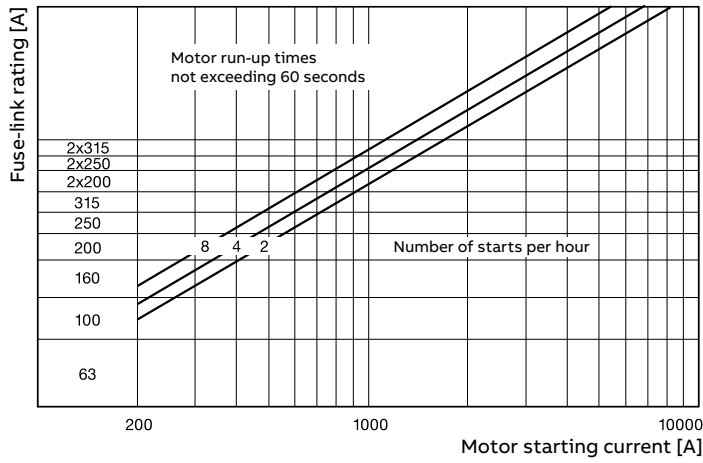

The minimum permissible current rating of the fuse links for motor protection may be determined from the selection charts. These three charts are for run-up times of 6, 15 and 60 seconds respectively. Each chart contains different characteristics, depending on the number of starts per hour. With reference to the number of starts per hour, the first two are in immediate succession while the rest are evenly spaced at intervals of one hour. The number of starts per hour indicates the time interval between separated starts. For example, four starts in 15 minutes are represented by 16 starts per hour. The horizontal axis of the selection chart indicates the motor starting current, while the current rating of the fuse link is found along the vertical axis.

Selection procedure:

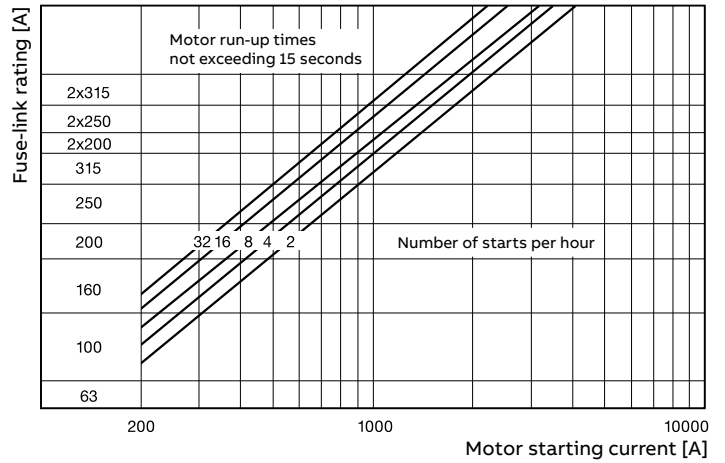

- Select the chart which is appropriate for the run-up time of the motor
- Select the starting current along the horizontal axis
- Depending on the number of starts per hour, select the correct characteristic (2, 4, 8, 16, 32)
- Read the correct fuse-link rating on the vertical axis.

Example	A	B
Starting current of the motor	850 A	250 A
Run-up time	6 seconds	15 seconds
Number of starts per hour	2	16
Chart number	3	2
Rated current of fuse link	250 A	160 A

Technical data fuse-links type CMF:

Fuses are meeting requirements of the standards: IEC 60282-1, PN-EN 60282-1 and IEC 60644. All ratings are back-up type, equipped with 80N striker (medium type) and sealed for indoor/outdoor application.

Fuse name	Rated voltage Un [kV]	Rated current In [A]	Fuse breaking capacity I1 [kA]	Fuse minimal breaking current I3 [A]	K factor	Rated power Pw [W]	Fuse-link cold resistance [mΩ]
